

Assessment of My Manure Storage Facilities

Manure storage facilities should be critically evaluated in the planning, design, construction, and operation and maintenance phases. Assessment checklists help ensure that a facility is receiving the necessary evaluation during each phase. Appendixes A through D provide checklists that enable producers to assess existing or proposed manure storage facilities and their potential environmental risks. The following environmental stewardship assessment tools are included to assist in this review process:

Assessment checklists help ensure that a facility is receiving the necessary evaluation... .

Appendix	Environmental Stewardship Assessment Tools	Associated Lesson
A	Sizing Considerations	21
B	Siting Considerations	23
C	Design and Construction	23
D	Operation and Management	24
